

PRODUCT DESCRIPTION:

High pH Presoak is designed for use as a single step cleaning compound in touchless car wash systems. The high use dilution rate affords superior economy to the wash operator. It generates copious amounts of foam (when used with compressed air injection) at use dilution. **High pH Presoak** will remove road film from even the most tenacious of vehicles to clean. It will not damage vehicles when used as directed. Rinses free and spotless in cold or hot water. The cationic polymer chemistry goes to work to break the magnetic bond that holds dirt on the vehicle. Once the magnetic bond is broken, the dirt and road film simply washes away.

USE DIRECTIONS:

High pH Presoak may be diluted with up to 75 parts water. Do not use at dilution rates below 1:50. **High pH Presoak** works best when used with soft water at temperatures above 115°F. If water hardness is above 6 grains, employ an ion exchange water softener to mix with this product. In areas of extremely hard water, we suggest that the car wash operator use a spot free rinse system (reverse osmosis) to insure the integrity of the wash job. A clean car with less spotting will result in a satisfied customer.
