

Sludge Buster

Lift Station Floating Degreaser/Cleaner

Algonquin Products Sludge Buster is formulated to act as an effective floating degreaser and deodorizer for lift stations in sanitary sewer systems.

It is a non-emulsifying product that will 'float' on the surface and will not harm bacteria because it does not mix with water

- A blend of powerful solvents quickly dissolve scum cake, grease and other oil residues from lift stations and other hard surfaces (metal, concrete, etc).
- Uses less product than other petroleum distillates
- Sludge Buster contains d'Limonene which acts as a great natural odor counteractant.
- The Sludge Buster floating degreaser creates a barrier/layer thus minimizing odors.

Application:

Apply a thin layer (1.6") on top of wastewater to prevent the formation of a scum blanket or grease balls and to minimize odors. Sludge Buster will also clean the walls of the tank as the water level rises and falls in the lift station.

<u>Lift Station Diameter</u>	<u>Recommendation</u>
36"	7 gal
48"	13 gal
60"	20 gal
72"	28 gal

Available sizes:

5 gal pail
20 gal drum
55 gal drum
275 gal tote

Ideal Coverage: 1 gal Sludge Buster per sq. ft of surface will yield 1.6" of coverage
